

### LISTING OF CLAIMS

The listing of claims provided below replaces all prior versions, and listings, of claims in the application.

5           1.       (Currently Amended) A method for automated acquisition of assertions in a specification of a computer program, comprising ~~the operations of:~~

              receiving ~~an input~~ the specification as an input, wherein the ~~input~~ specification includes ~~comprises~~ a plurality of sentences describing the computer program;

              obtaining a sentence from the plurality of sentences;

10           determining whether the obtained sentence is a testable assertion, wherein the testable assertion describes behavior of an application programming interface that can be tested; and

              marking the obtained sentence as testable when the obtained sentence is a testable assertion; and

15           using the sentences marked as testable to determine whether a test suite for testing the computer program is adequate.

              2.       (Currently Amended) The ~~[[A]]~~ method as recited in claim 1, further comprising:

20           ~~the operation of~~ identifying a context within the specification.

              3.       (Currently Amended) The ~~[[A]]~~ method as recited in claim 2, wherein the operation of obtaining the sentence from the plurality of sentences includes parsing the context to obtain the sentence.

25

4. (Currently Amended) The ~~[[A]]~~ method as recited in claim 3, further comprising:

~~the operation of~~ adding the marked obtained sentence to an assertion result set.

5 5. (Currently Amended) The ~~[[A]]~~ method as recited in claim 4, wherein the context is a set of circumstances related to the obtained sentence.

6. (Currently Amended) The ~~[[A]]~~ method as recited in claim 5, wherein each assertion includes ~~comprises~~ at least one sentence of the specification.

10

7. (Currently Amended) The ~~[[A]]~~ method as recited in claim 5 ~~[[9]]~~, wherein each assertion includes ~~can comprises~~ at least two sentences of the specification.

8. (Currently Amended) A computer readable media including program instructions for automatically obtaining assertions from a specification of ~~for~~ a computer program, comprising:

a code segment that receives ~~an input~~ the specification as an input ~~for a computer program~~;

a code segment that identifies a context within the ~~input~~ specification;

20 a code segment that parses the identified context to obtain sentences ~~assertions~~;

a code segment that determines whether the obtained sentences ~~assertions~~ are testable assertions statements, wherein each testable assertion is a sentence that describes behavior of an application programming interface that can be tested; and

a code segment that adds the testable ~~obtained~~ assertions to an assertion result set,  
25 wherein the assertion result set can be used to facilitate testing of the specification.

9. (Currently Amended) The [[A]] computer readable media of program as recited in claim 8, further comprising:

a code segment that filters the identified context prior to parsing the context.

5

10. (Currently Amended) The [[A]] computer readable media of program as recited in claim 9, wherein the code segment that receives the specification is defined to receive the specification in a text format an assertion is an implied statement that can be tested.

10

11. (Currently Amended) The [[A]] computer readable media of program as recited in claim 9, wherein the context is a set of circumstances related to the obtained sentences assertions.

15

12. (Currently Amended) The [[A]] computer readable media of program as recited in claim 9, wherein each assertion includes comprises at least one sentence of the specification.

20

13. (Currently Amended) The [[A]] computer readable media of program as recited in claim 9, wherein each assertion includes can comprises at least two sentences of the specification.

25

14. (Currently Amended) A computer readable media including program instructions for automated acquisition of assertions in a specification of a computer program, comprising:

a code segment that receives ~~an input~~ the specification in a text format, wherein the ~~input~~ specification includes ~~comprises~~ a plurality of sentences;

a code segment that obtains a sentence from the plurality of sentences;

a code segment that determines whether the obtained sentence is a testable  
5 assertion, wherein the testable assertion describes behavior of an application  
programming interface that can be tested; and

a code segment that marks the obtained sentence as testable when the obtained sentence is a testable assertion.

10 15. (Currently Amended) The [[A]] computer readable media of ~~program as~~  
~~recited in~~ claim 14, further comprising:

a code segment that identifies a context within the specification.

15 16. (Currently Amended) The [[A]] computer readable media of ~~program as~~  
~~recited in~~ claim 15, wherein the code segment that obtains the sentence from the plurality of sentences includes a code segment that parses the context to obtain the sentence.

17. (Currently Amended) The [[A]] computer readable media of ~~program as~~  
~~recited in~~ claim 16, further comprising:

20 a code segment that adds the marked obtained sentence to an assertion result set.

18. (Currently Amended) The [[A]] computer readable media of ~~program as~~  
~~recited in~~ claim 17, wherein the context is a set of circumstances related to the obtained sentence.

25

19. (Currently Amended) The ~~[[A]]~~ computer readable media of ~~program as~~  
~~recited in~~ claim 18, wherein each assertion includes ~~can comprises~~ at least one sentence of the  
specification.

5           20. (Currently Amended) The ~~[[A]]~~ computer readable media of ~~program as~~  
~~recited in~~ claim 19, wherein each assertion includes ~~can comprises~~ at least two sentences  
of the specification.

10
